Giorgi Zoidze

Frontend Developer (React / TypeScript)

Tbilisi, Georgia | +995 595 271 670 | gzoidze1997@gmail.com | LinkedIn | Portfolio

SUMMARY

Frontend developer with experience shipping production React/TypeScript interfaces for complex, data-heavy applications — most recently across loan origination, collateral, and customer-data systems at a bank, plus a SaaS product as co-founder. Strong with state management, performance, and translating designs into accessible, production-ready UI. Also comfortable reaching into backend logic (Oracle PL/SQL, Node.js) when a feature needs it.

EXPERIENCE

Full Stack Developer — Silk Bank | *Tbilisi, Georgia | Jan 2025 – Present*

- Lead frontend development across the Loans module (registration, conditions, collateral, payment, issuance, closing) and the Cards and Deposits modules, building React/TypeScript UI for high-stakes financial workflows.
- Own the Contract/Loan Scheme feature end-to-end, including the React/TypeScript UI for loan repayment and contract scheduling, backed by an Oracle PL/SQL service layer.
- Built the "Main Properties" collateral module UI, working closely with backend data views to support complex collateral workflows.
- Contribute to the customer data package underpinning KYC, contact, and account information platform-wide.

React Developer — Nexus (placed at Silk Bank) | *Tbilisi, Georgia | Mar 2024 – Dec 2024*

- Built the initial Merchants management module (list, filters, new merchant creation) and the UCC payments/authorization module (client search, save/pay/cancel, sortable/filterable tables), then delivered the SMS Bank registration and management flow, including client registration and history filtering.
- Refactored transaction list pages and shared components to modern React patterns (hooks, context-based state).

Front-End Developer — Quantori | *Tbilisi, Georgia | Oct 2021 – Sep 2023*

- Delivered production React/TypeScript features (Redux, Zustand, Effector) and improved performance and responsiveness of existing UI through memoization, lazy loading, and efficient state updates.
- Used modern UI libraries and design systems (Semantic UI, Tailwind CSS, Material UI, Ant Design) to accelerate delivery, and wrote unit tests with Jest to improve reliability and reduce regressions.
- Translated Figma designs into pixel-perfect, production-ready interfaces.

Employment Outside the Software Industry | *Georgia | 2020 – 2021*

- Worked in a different field during this period, before returning to front-end development.

Front-End Developer — Freelance | *Remote | Jan 2019 – Jan 2020*

- Developed responsive, high-performance landing pages and interactive UI features using HTML, CSS, JavaScript, and React, ensuring cross-browser and cross-device compatibility.
- Tested, debugged, and optimized each project for production, coordinating with backend developers and designers on API integration and UI implementation.

PROJECTS

Co-Founder & Frontend Developer — Ianua ianua.io | *Independent venture | Jul 2026 – Present*

- Co-founded a zero-trust identity and access gateway product; own frontend architecture and delivery across the marketing site and product UI.

Full-Stack Developer — Expense Tracker expense-tracker-tau-blue-23.vercel.app | *Personal project | Sep 2026*

- Designed and built a solo full-stack expense-splitting app (Next.js, Prisma, PostgreSQL) with JWT-based auth, Zod-validated APIs, and a minimum-cash-flow settlement algorithm that reduces group balances to the fewest necessary payments; covered the core logic with a Vitest test suite.

Freelance Frontend Developer — Kakheti Selection kakhetiselection.com | *Client project | May 2026 – Jul 2026*

- Built the bilingual (French/English) frontend for a Georgian wine and spirits e-commerce site serving the European market, including SEO and social-sharing setup.

EDUCATION

Bachelor of Computer Technologies and Engineering — *International Black Sea University, Georgia | 2015 – 2019*

SKILLS

Frontend: React, Next.js, Redux, Redux Toolkit, Zustand, TanStack Query, React Router, Ant Design, Tailwind CSS, Material UI, Semantic UI, Styled Components

Languages & Core: JavaScript, TypeScript, HTML5, CSS, SASS

Backend (familiarity): Node.js, Express.js, PostgreSQL, Prisma, Zod, MongoDB, Mongoose, Oracle PL/SQL, Liquibase

Tooling: Git, Webpack, Vite, ESLint, Prettier, Jest, Vitest, Postman, Figma

Practices: Agile/Scrum, BEM, WCAG Accessibility

CERTIFICATIONS

- Go - The Complete Guide (Oct 2026)
- Next.js 15 & React – The Complete Guide (Aug 2025)
- Understanding TypeScript (Sep 2024)
- Node.js, Express, MongoDB & More: The Complete Bootcamp (2023)
- JavaScript Algorithms and Data Structures (Aug 2023)
- Modern react with redux (Feb 2023)
- The complete javascript course 2022: from zero to expert (May 2022)

LANGUAGES

Georgian — Native | English — Fluent
